Why learning about Pipeline Pilot?

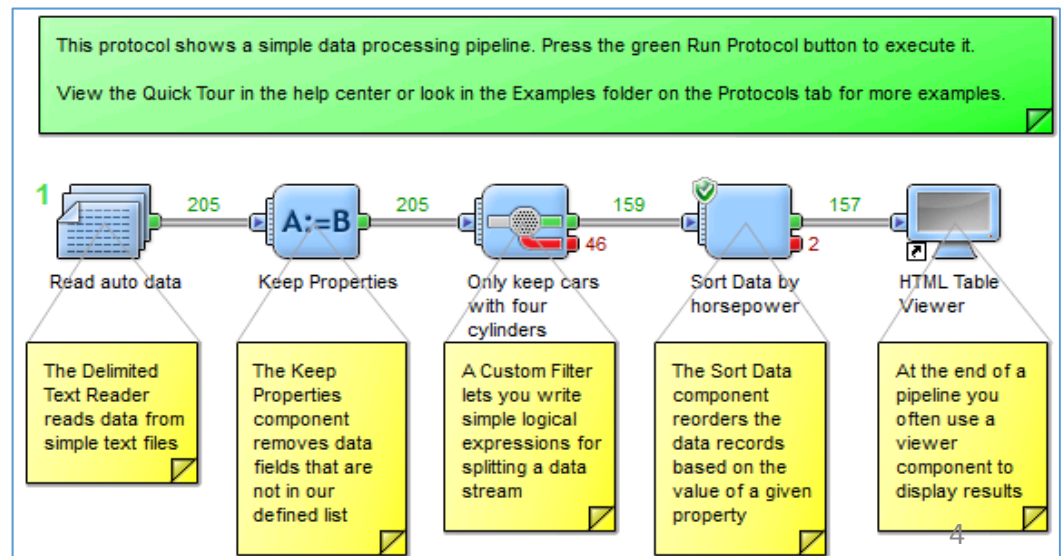

Pipeline Pilot overview (3 min video)

https://www.youtube.com/watch?v=nZ2YMNv-uTk&feature=youtube_gdata

What is Pipeline Pilot?

- Pipeline Pilot is a commercially developed workflow environment (like Galaxy) that will be incorporated into Genomic England.
- PP enables scientists to create, test and publish scientific services that automate the process of accessing, analyzing and reporting scientific data.
- **Anyone** can create scientific protocols that provide access to research data locked in silos (like Genomic England). These protocols automate the scientific analysis of the data and enable researchers to rapidly explore, visualize and report results.
- PP allows sharing workflows

Why using Pipeline Pilot?

- To access Genomics England's Data
- Complete R&D projects faster by leveraging existing research and automating routine data gathering and analysis processes.
- Encapsulate and deploy best practices to ensure compliance and enable collaboration across your research and development organizations.
- Build and deploy your solution based upon standard technologies.
- Faster results through real-time reporting dashboards.
- Reduce support costs by integrating incompatible software and databases.

How does Pipeline Pilot work?

What is a Component?

- A component is the building block used to create workflows
- Each component performs a task like reading, writing or manipulating data
- Components can have one input and up to two output ports
- Highlighting a component displays its parameter panel which control its behavior

Parameters	
Source	
File Format	Infer From File Extension
Maximum	
SourceTag	None
Keep Properties	
Read Features	False

What is a Pipeline?

- A series of *components* connected through pipes through which data flows.
- Each component acts on the data and passes it on to subsequent components.

Data Flow in a Pipeline

File Reader

Molecular Weight

Notepad Viewer

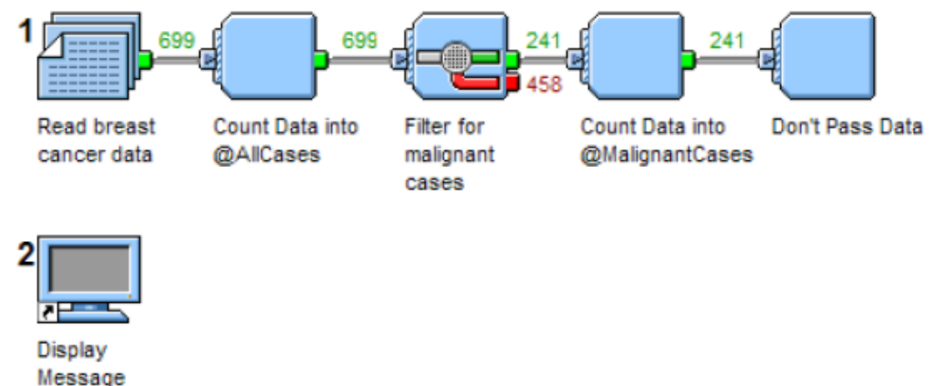

MSC Reads data records from flat file
ONLY THE BEST

Calculates MW and adds to record

Displays records as rows in NotePad

What is a Protocol?

- A protocol consists of one or multiple pipelines that are run sequentially.
- Components are executed left to right, top to bottom.
- Pipeline 2 will not start processing data until pipeline 1 has completely finished processing all the records.

Pipeline Pilot Main Window

The screenshot shows the Pipeline Pilot Professional Client interface. The main workspace displays a pipeline with three components: '3D Reader', 'Custom Manipulator (PlotScript)', and 'HTML Molecular Table Viewer'. The interface includes a menu bar, a toolbar, a left-hand Explorer Window, a bottom Task bar, and a bottom Status bar. A Help Text panel is visible at the bottom left, and a Parameter Panel is at the bottom right.

Annotations with arrows pointing to specific UI elements:

- Search Bar**: Located at the top left of the Explorer Window.
- Explorer Window**: The left-hand pane showing a tree view of protocols and components.
- Additional tools**: A group of icons in the top toolbar.
- Favorites**: A group of icons in the top toolbar, to the right of the additional tools.
- Pipeline**: The main workspace area showing the workflow components.
- Component**: A single element within the pipeline, such as the 'Custom Manipulator'.
- Protocol**: The overall workflow being executed.
- Task bar**: The bottom bar showing the current task status.
- Status bar**: The bottom bar showing the elapsed time (20 seconds).
- Help Text**: A panel at the bottom left providing documentation for the selected component.
- Parameter Panel**: A panel at the bottom right for configuring parameters.
